Attach volume

Attach a volume to an instance to use it as you would a regular physical hard disk drive.

Basic details

Volume ID
vol-012c989d6c4264efb (Linux)

Availability Zone
us-east-1a (us-east-1)

Instance
i-0f7d9b65f186668ad (Linux (bottles))

Device name
/dev/xvddb

Recommended device names for Linux: /dev/sda1 for root volume, /dev/sdf-p for data volumes.

Newer Linux kernels may rename your devices to /dev/xvdf through /dev/xvdp internally, even when the device name entered here (and shown in the details) is /dev/hdf through /dev/udp.

Cancel Attach volume

root@ip-172-31-25-222:~# fdisk /dev/nvme1n1

Welcome to fdisk (util-linux 2.41.3).
Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

Device does not contain a recognized partition table.
Created a new DOS (MBR) disklabel with disk identifier 0x0f6a7d32.

Command (m for help): p
Disk /dev/nvme1n1: 5 GiB, 5368709120 bytes, 10485760 sectors
Disk model: Amazon Elastic Block Store
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 4096 bytes / 4096 bytes
Disklabel type: dos
Disk identifier: 0x0f6a7d32

Command (m for help): m

Help:

DOS (MBR)
a toggle a bootable flag
b edit nested BSD disklabel
c toggle the dos compatibility flag

Generic
d delete a partition
F list free unpartitioned space
l list known partition types
n add a new partition
p print the partition table

Command (m for help): n
Partition type
p primary (0 primary, 0 extended, 4 free)
e extended (container for logical partitions)
Select (default p): p
Partition number (1-4, default 1): 1
First sector (2048-10485759, default 2048):
Last sector, +/-sectors or +/-size{K,M,G,T,P} (2048-10485759, default 10485759): 5G
Value out of range.
Last sector, +/-sectors or +/-size{K,M,G,T,P} (2048-10485759, default 10485759): +5

Created a new partition 1 of type 'Linux' and of size 3 KiB.

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.

Attach volume

Attach a volume to an instance to use it as you would a regular physical hard disk drive.

Basic details

Volume ID: [vol-05fca6fa62ba6f638 \(Linux\)](#)

Availability Zone: us-east-1a (us-east-1)

Instance: [i-0709be5196668dad \(Linux\) \(running\)](#)

Device name: [/dev/xvdc](#)

Only instances in the same Availability Zone as the selected volume are displayed.

Recommended device names for Linux: /dev/xvda1 for root volume, /dev/xvdf1 for data volumes.

ⓘ Newer Linux kernels may rename your devices to /dev/xvdf through /dev/xvdp internally, even when the device name entered here (and shown in the details) is /dev/xvdf through /dev/xvdp.

Cancel Attach volume

root@ip-172-31-25-222:~# df -h
